Project Guidelines

Engr 315: Hardware / Software Codesign

Andrew Lukefahr
Indiana University

A baby update

- Elijah Phillips Lukefahr

- 9 lbs, 12 oz
- 23 inches
- (That's *really* big for a baby)

Project Guidelines

- Make the code run in <12 seconds.
- How is up to you.
- Hardware or software solutions are fine
  - Software can do <12 seconds

Project Grading Scale

- C
  - I switched to numpy's tanh, it wasn't fast enough
- B
  - I kinda tried 3 different approaches, none worked well
  - I got faster, but still didn't make 12 seconds
- A
  - I tried 3 different approaches, 1 of them worked!
  - I got under 12 seconds!

Report Guidelines

- What did you do?
- What worked, what didn't? ***WHY?***
- **What did you learn?**
- What would you do different in the future?

- **Report grade independent of project grade.**
  - Can still get 100% with <12 second runtime

Report Grading Scale

- C
  - I filled up 4 pages with something.
  - I didn’t answer the questions.
- B
  - I described my project.
  - I answered most of the questions
  - I didn’t explain what I learned
- A
  - I described my project, and what turn out didn’t work
  - I answer the questions.
  - I learned why it is difficult to correctly multithread Python.
